

design.book

capture and share your design process.

design.book

Is a mobile application for designers and design enthusiasts to document, organize, and share their design journeys with each other.

By giving designers a quick way to curate their process, the app helps them visualize and communicate their process in different ways.

manifesto

Our motivation around creating design book is to allow design enthusiasts to peer into the process and techniques of other designers and learn from each others experiences.

d.school & us

Follows the d.school design process as a guideline for designers to document their design journey.

WHERE does
it live?

@ D.School Resources:
Leverage digital tools to help a
much broader audience discover
creative learning experiences.

process overview

The application guides a user or a team as they follow a design process, allowing them to visually capture details about different design activities such as brainstorming, mind-maps, user scenarios, interview etc. Since the app captures the various stages and activities of the design process, users can share their experiences of designing products and services with others.

HOW it works

take photos using our design.book app

assign to pre defined design stage buckets

view and share your design journey with peers and friends in a process view or a timeline view.

WHAT it does

by giving designers a quick way to curate their process, the app helps them visualize and communicate their process in different ways.

WHY it works

design.book builds a strong community of designers who share their process with peers and other stake holders.

design.book helps designers sort and manage their process photos (we all have them!)

design.book helps propagate the d.school design process.
